ALABAMA

Index to topographic and other MAP COVERAGE

Published and distributed by

UNITED STATES GEOLOGICAL SURVEY

National Mapping Program

NOTE: The information contained in this *Index to topographic and other Map Coverage* is valid indefinitely. PLEASE RETAIN THIS COPY

The information contained in the companion *Catalog of topographic and other Published Maps* is updated and reissued periodically

1-28-15,000
12-83

This index is designed to inform map users of the various series of maps produced and distributed by the U.S. Geological Survey, and to assist users in selecting and purchasing maps. The index identifies quadrangle areas by reference code, map name, and scale. A map is usually named after the most prominent city, town, or natural landmark shown on it

To Select Maps

See page 2
for description of the National Mapping Program and the types of maps available

See page 3
for description of the series and scales of standard quadrangle maps available

See page 4
to locate general area of interest

See page 5
for instructions to find location and name of specific area of interest

See pages 6 through 23
for the location and names of large-scale maps

See pages 24 through 27
for the location of names of intermediate-scale and small-scale maps

See pages 28 through 32
for alphabetical listing of quadrangle areas

See pages 33 and 34
for listing of miscellaneous maps

To Purchase Maps

Refer to the companion *Catalog of topographic and other Published Maps* for names, dates, and prices of maps currently available
Published maps listed in the catalog may be purchased by mail or in person by contacting:

- *Commercial Map Dealers*
  listed in the companion
  Catalog of Published Maps

- *Map Distribution Branch*
  U.S. Geological Survey
  Box 25286, Federal Center
  Denver, Colorado 80225

Open file maps and map products listed in the catalog may be purchased by mail or in person by contacting:

- *Mid-Continent Mapping Center (NCIC-M)*
  U. S. Geological Survey
  1400 Independence Road
  Rolla, Missouri 65401

Order forms and instructions are contained in the catalog. When ordering maps from the USGS by mail, prepayment is required. Remittance payable to the Department of the Interior – USGS

THE NATIONAL MAPPING PROGRAM

The National Mapping Program publishes a variety of multipurpose maps to serve all map users. In addition to published maps, basic map data and open-file map byproducts are available. These include aerial photographs, satellite images, advance and reproducible map materials, geodetic control data, geographic-names data, status maps, microfilm map copies, and map data in digital form.

An *Index to topographic and other Map Coverage* and a companion *Catalog of topographic and other Published Maps* are planned for each State.

TYPES OF MAPS:

Topographic Maps

A topographic map accurately represents the natural and manmade features of the land. USGS topographic maps are compiled to National Map Accuracy Standards using modern mapping techniques. The shape and elevation of the terrain are portrayed by contour lines and specific features such as roads, towns, water areas, and vegetation are portrayed by map symbols and colors. Standard quadrangle series maps are produced at the scale and formats shown on opposite page.

Topographic-Bathymetric Maps

A topographic-bathymetric map provides topographic and planimetric detail of the land areas and bathymetric metric contours and depth gradients in the coastal water area. These maps, covering selected coastal zone areas, are cooperatively produced by the Geological Survey and the National Ocean Survey at scales of 1:24,000, 1:100,000, and 1:250,000. Offshore protraction survey data compiled by the Bureau of Land Management are shown on 1:100,000- and 1:250,000-scale maps.

Land Use and Land Cover Maps

Standard land use and land cover maps at 1:250,000 or 1:100,000 scale are available or planned for the entire United States. These maps depict the 9 Level I and 37 Level II USGS categories of data. Four associated maps show political units, hydrologic units, Census county subdivisions, and Federal land ownership.

Orthophotoquads

An orthophotoquad is a black-and-white photoimage prepared from aerial photographs that have been rectified to eliminate image displacement due to terrain relief. Orthophotoquads are generally prepared in 7.5-minute quadrangle format and contain a reference grid and a few geographic names for orientation. They are useful as companions to standard topographic maps or as interim maps for areas not mapped at large scales.

Orthophotomaps

An orthophotomap is a multicolor orthophotoquad having extensive cartographic treatment including contours, lettering, and some symbols. Where conventional topographic line maps are ineffective in portraying terrain features, colored orthophotoimagery accentuates subtle detail. For some areas—predominately marshlands and coastal zones—the orthophotomap is the standard 1:24,000-scale map.

State Maps

State-format maps are generally available in three editions—base, topographic, and shaded relief—usually at a scale of 1:500,000. State base maps are also available at 1:1,000,000. The maps show urban areas, major communication routes, hydrographic features, and political boundaries.

County Maps

Produced at 1:50,000 or 1:100,000 scale, county maps show selected natural and cultural features. At the present time, county maps are available for a limited number of areas.

Special Maps

Special-purpose maps are usually derived from standard topographic maps. These include maps of specific cultural or geographic regions, shaded relief maps, metropolitan area maps, and sets of maps illustrating special physiographic features.

United States Maps

There are several different U.S. Maps available in a variety of formats, ranging from 9½ x 13 inches at 1:16,500,000 scale to 54 x 80 inches at 1:2,500,000 scale.

National Park and Monument Maps

Maps of national parks, battlefields, and historic sites are prepared at various scales from standard topographic maps. Many are available with a shaded-relief overprint which gives a three dimensional impression of the terrain.

National Atlas Maps

Separate sheets of selected thematic and general reference National Atlas maps are available. The content ranges from physiographic information to environmental and population trends. One set of maps (also available singly) covers the United States in 21 sections at 1:2,000,000 scale; another details the 25 largest urban areas at 1:500,000 scale.

Antarctica Maps

Topographic maps covering selected areas of Antarctica, prepared in cooperation with the National Science Foundation in support of the U.S. Antarctica Research Program (USARP), are available at scales of 1:250,000, 1:500,000, 1:1,000,000, and 1:2,188,800. In addition, topographic maps covering selected dry valley areas of southern Victoria Land are available at a scale of 1:50,000. Generally Antarctica maps are published with a shaded-relief overprint to enhance the impression of relief and to accentuate such detail as glaciers, crevasses, and ice tongues.

STANDARD SERIES MAPS

Standard quadrangle maps cover systematically subdivided areas of latitude and longitude, and are published at various scales depending on the size of the area mapped

Standard quadrangle formats range from 7.5x7.5 minutes covering geographic areas of 49 to 71 square miles to 1x2 degrees covering areas of 4580 to 8669 square miles

Standard quadrangle map scales range from 1:24 000 (one inch on the map represents 2000 feet on the ground) to 1:250 000 (one inch on the map represents approximately 4 miles on the ground)

Other quadrangle maps are published at scales of 1:20 000 (Puerto Rico) to 1:63 360 (Alaska) and 1:1 000 000 (International Map of the World)

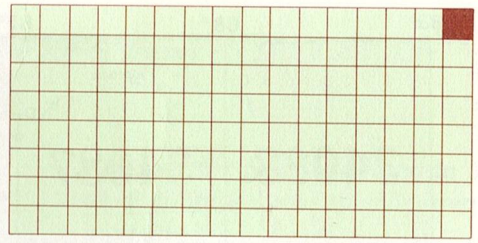

Special area maps are published at scales of 1:50 000 and 1:100 000 (County, Regional, and National Park Maps), and 1:500 000 (State Base Maps).

MAP SERIES COMPARISON

Illustrated opposite is the relative comparison of the size of the area covered by the various map series. Comparatively, the number of maps required to cover an area of 1 degree latitude by 2 degrees longitude is:

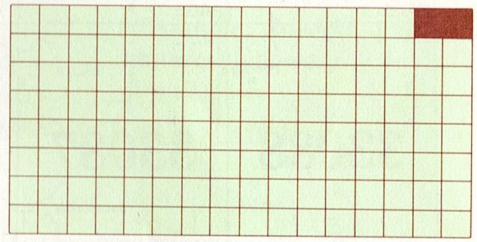

128—7.5 minute maps
64—7.5x15 minute maps
32—15 minute maps
4—30x60 minute maps
1—1x2 degree map

The amount of detail shown on a map is proportionate to the scale of the map; the larger the map scale, the more detail that is shown. For example, individual houses are shown on 1:24 000-scale 7.5-minute maps, whereas only landmark buildings are shown on 1:100 000-scale 30x60-minute maps.

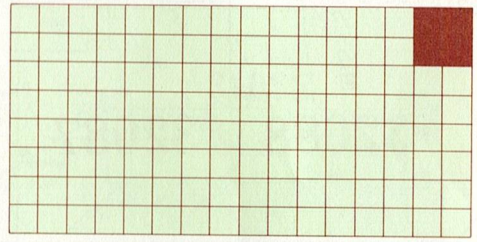

7.5 MINUTE SERIES

Map scale[1] 1:24 000
Map to ground ratio ..... 1 inch represents 2000 feet
Area covered ..... 49–71 square miles
Paper size (approx.) ..... 22″x27″
Contours and elevations[2] ..... shown in feet

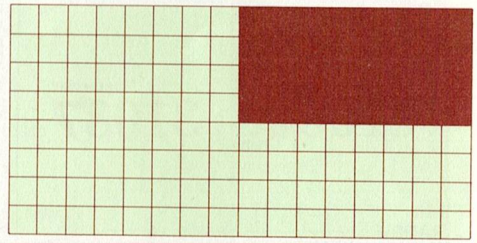

7.5 X 15 MINUTE SERIES

Map scale 1:25 000
Map to ground ratio ..... 1 inch represents 2083 feet
Area covered ..... 100–140 square miles
Paper size (approx.) ..... 24″x40″
Contours and elevations ..... shown in meters

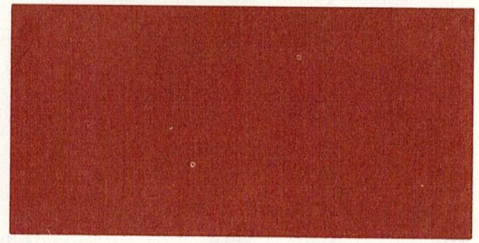

15 MINUTE SERIES

Map scale[3] 1:62 500
Map to ground ratio ..... 1 inch represents about 1 mile
Area covered ..... 197–282 square miles
Paper size (approx.) ..... 18″x22″
Contours and elevations[2] ..... shown in feet

30 X 60 MINUTE SERIES

Map scale 1:100 000
Map to ground ratio ..... 1 inch represents 1.6 miles
Area covered ..... 1578–2167 square miles
Paper size (approx.) ..... 29″x44″
Contours and elevations[2] ..... shown in meters

1 X 2 DEGREE SERIES

Map scale 1:250 000
Map to ground ratio ..... 1 inch represents about 4 miles
Area covered ..... 4580–8669 square miles
Paper size (approx.) ..... 22″x32″
Contours and elevations ..... shown in feet

[1] 1:25 000 scale on selected maps
[2] Shown in meters on selected maps
[3] 1:50 000 scale on selected maps

TO LOCATE GENERAL AREA OF INTEREST

Refer to the State location map (opposite) which is shown divided into 1 degree blocks of latitude and longitude, with each block identified with its origin at the southeast corner.

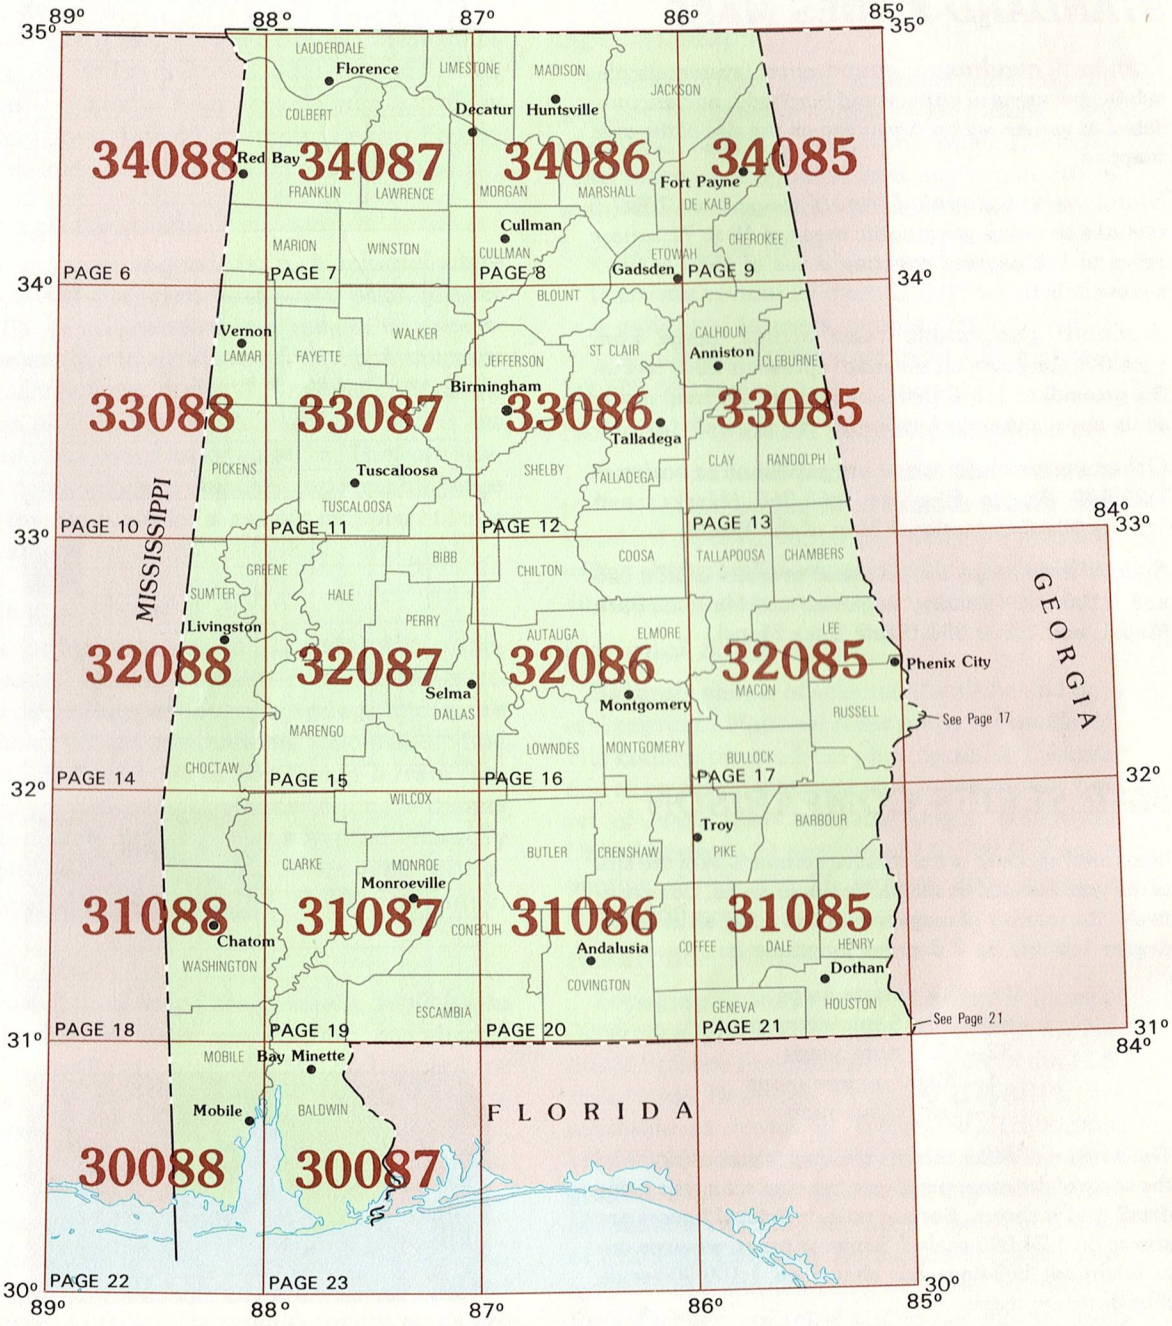

Example: Andalusia is located in block 31086 (31° latitude and 86° longitude) which is shown in detail on page 20.

For intermediate-scale (1:50 000—1:100 000) and small-scale (1:250 000 and smaller) map coverage see pages 24-27.

For map coverage outside Alabama see adjoining State indexes.

INFORMATION PAMPHLETS

To assist the map user in selecting the kind and scale of map best suited to his particular needs, the Geological Survey has available several pamphlets describing various types and uses of maps. Two such booklets are "Topographic Maps", which includes symbols, and "Topographic Maps-Tools for Planning." Both pamphlets can be obtained without cost from the Branch of Distribution, U.S. Geological Survey.

TO LOCATE SPECIFIC AREA OF INTEREST

1. Refer to the State diagram shown on the opposite page to locate the block covering your *general area* of interest

   Example: *General* area of interest—Andalusia

2. Refer to the page indicated in the block to locate your *specific area* of interest

   Example: *Specific area* of interest—Lowery

3. Refer to the coded list of available maps for the name of the map you desire. Refer to the *Catalog of Published Maps* for the dates of available maps

   Example: *Name of map* desired—Kinston

PAGE 20

Each 1-degree block is divided into 64 7.5-minute quadrangle areas, each identified by an alpha-numeric code. The quadrangle name appears opposite the code
